Landon Haugh

422 Christi Lane, Biloxi, MS 39531 | 228-223-0363 | landon.haugh1@gmail.com | http://landonh12.github.io

Objective

Earn a Software Developer Intern position at Babel Street for the fall 2019 semester and beyond.

Education

BACHELOR OF SCIENCE / COMPUTER ENGINEERING | SENIOR | MISSISSIPPI STATE

- Related coursework: Data Structures | Operating Systems | Distributed Client/Server Programming | Data Comm Networks | Intro to Algorithms | Microprocessors | Computer Architecture | Embedded Systems
- 15 Hours of coursework until graduation

Experience

ENGINEERING CO-OP | HONDA MANUFACTURING OF ALABAMA | SUMMER '18/'19

- 1st term
  - Created a transmission control unit adapter to control 10-speed transmissions manually for dyno testing
  - Travelled to Keihin to inspect ECU bent pin issues and improve computer vision quality checks
  - Asserted engine quality issues for new model vehicles
- 2nd Term
  - Edited PLC logic to help improve assembly line processes
  - Added safety devices for robot teaching
  - Performed automation electronics wiring to specification

APP DEVELOPER | CARLOW DIGITAL ARTS & TECHNOLOGIES | MAY-SEPTEMBER 2015

- Developed an iOS/Android app for Mississippi teachers to keep track of conferences
- Utilized a massive SQL database to populate scroll-view cells
- Parsed SOAP XML queries to gather data

Skills & Abilities

TECHNICAL SKILLS

- Several years' experience with object oriented languages (C/C++, Java, Python, etc.)
- Proficient with web technologies (HTML/CSS, JavaScript, SQL, PHP, Firebase)
- iOS / Android app development experience
- Embedded Systems / Control Systems experience (PIC µC, National Instruments, OMRON)
- Comfortable with all 3 major operating systems (Windows, Linux, macOS)

EXTRACURRICULAR

- FIRST Robotics Team 364 Control Systems Mentor
  - Teach and collaborate with high school students to design and manufacture an advanced control system for the FIRST Robotics Competition
  - Utilize computer vision, feedback control (PID/F), path generation, etc. for the robot's control system
  - Ranked 1st place in the Carver division at the FIRST World Championships this past spring
- EcoCAR (Spring-Fall 2018)
  - Designed DTC trouble code system for output to driver HUD
  - Used CAN technology to communicate data between controllers in the car
